

CRACK REPAIR INJECTION SYSTEM

*because it's not
just a crack in
your basement...*

*it's a crack in your
largest investment™*

CRACK REPAIR INJECTIONS

Our specially formulated crack repair injection system is designed to push water away and increase structural strength to concrete. The use of our injection systems provide superior solutions to cracks in concrete basements, foundation walls, and structures.

Our formulated epoxy system is designed to stop concrete deterioration at the crack, while protecting the steel reinforcement inside the impacted area. The urethane injection resin acts to push water away to facilitate the sealing of cracks in basement walls. Our system can protect the interior living space of your home from incoming water, air, and bugs.

- 1.** The walls are prepared for installation by sanding the area clean of debris.

- 2.** Injections ports are installed and sealed off.

- 3.** Our specially formulated resin is injected into the crack through the ports.

In addition to our high strength Polyurethane to fill the existing void, Helitech utilizes the CarbonBond Structural System as a reinforcement of concrete and block basement walls. High tensile strength Carbon Fiber sheets are often installed over crack injection work to stop any further movement. With Carbon Fiber materials stronger than steel, CarbonBond bridges the forces to fix the crack.

Celebrating 30 years of Healing Homes.
